

Fiat Powertrain and Suzuki Motor Corporation have signed an agreement for the supply to Suzuki of Fiat Powertrain's 1.6 MultiJet II 120hp Diesel engine

Fiat Powertrain (Fiat S.p.A.) and Suzuki Motor Corporation have signed an agreement for the supply to Suzuki of Fiat Powertrain's 1.6 MultiJet II 120hp Diesel engine for fitment to Suzuki's New SX4 vehicle.

The 1.6 MultiJet II 120hp will replace, on Suzuki's future SX4 platform, the actual 2.0L 135hp Fiat Powertrain engine powering the current SX4 platform.

This agreement widens and strengthens the very positive long term business relationship between Suzuki and Fiat Powertrain based on already existing projects, which include the mentioned supply of the 2.0L MultiJet 135Hp, as well as the manufacturing licence of the 1.3L MultiJet 75hp-90hp Small Diesel Engine which is currently produced by a Suzuki sister company in India.

The 1.6 MultiJet II 120hp engine will be manufactured by Fiat Powertrain at its Pratola Serra plant (Avellino), and will be delivered to the Magyar Suzuki plant, Hungary.

The 1.6 MultiJet II 120hp is a 4 cylinder 16 valve engine, equipped with MultiJet II fuel injection system with Injection Rate Shaping technology, variable geometry turbocharger, variable displacement oil pump and close coupled DPF. All these contents will ensure high level of performance while reducing fuel consumption and CO₂ emissions.
